QUESTION :1 Hexadecimal Colour Comparison

EXPLANATION:

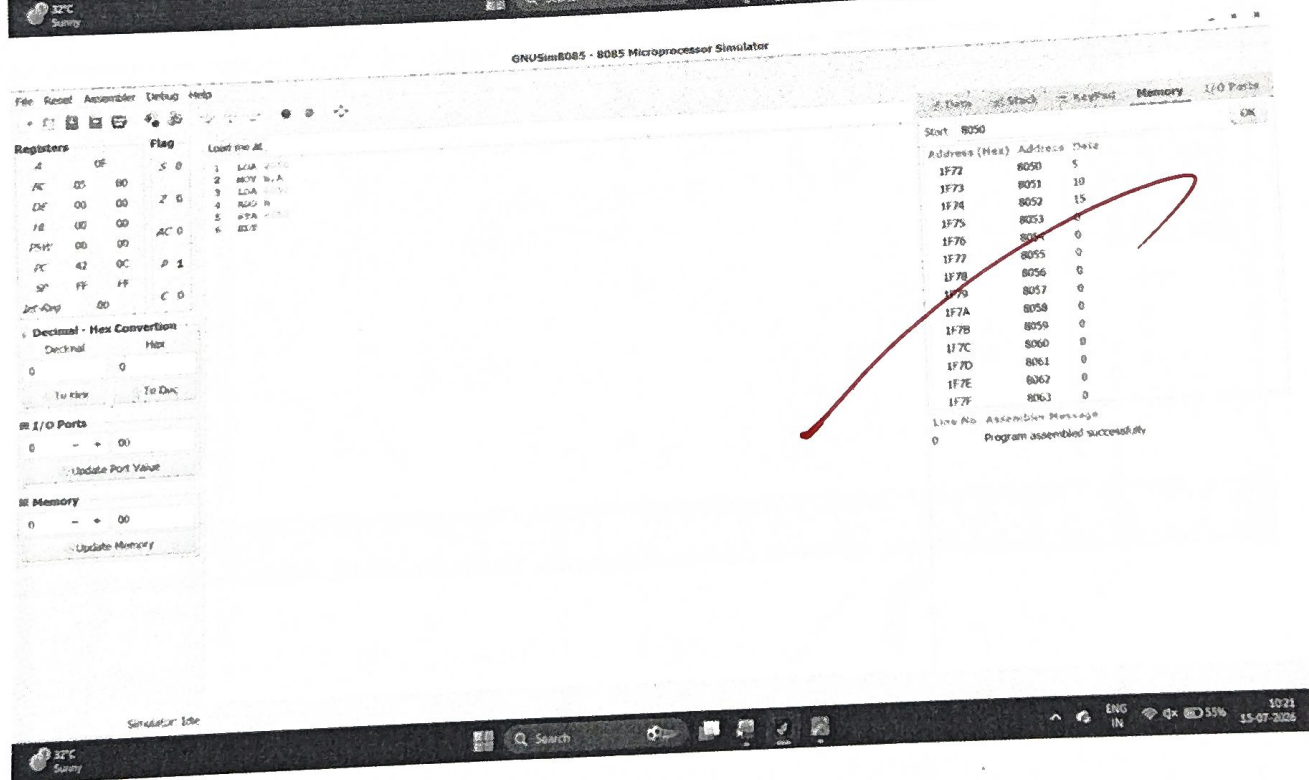

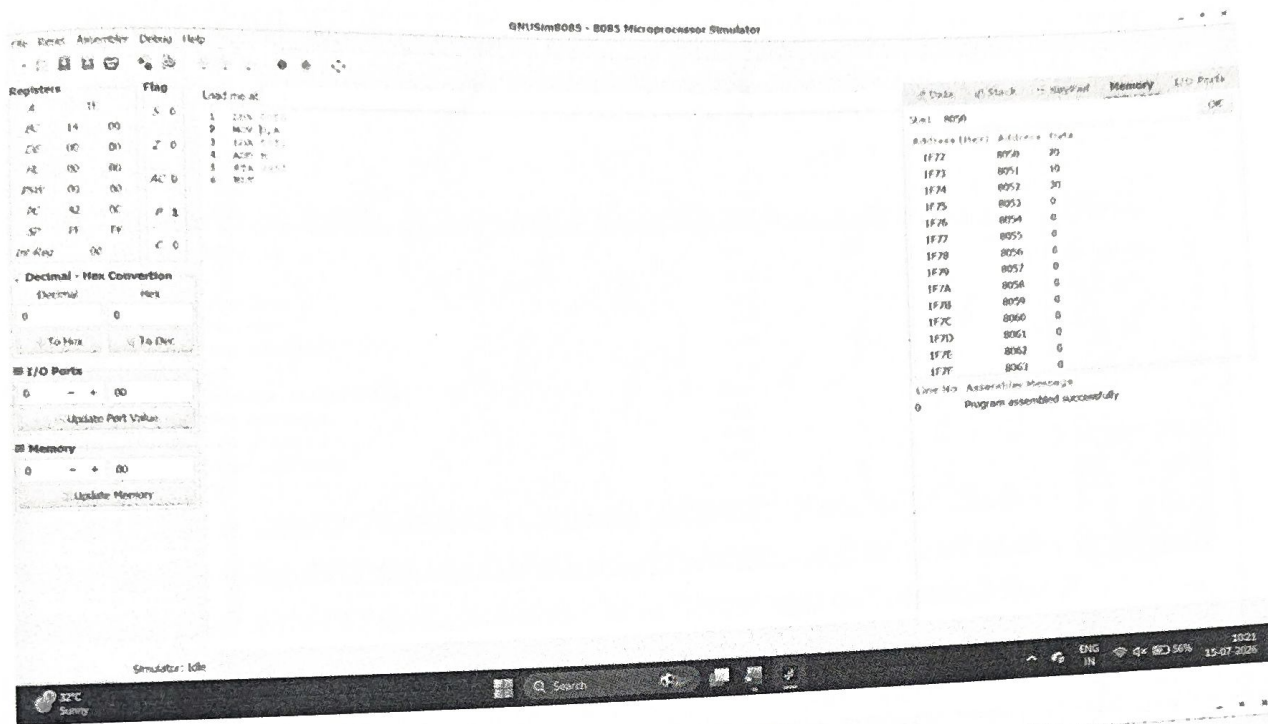

- #FF0000 is bright red.
- #F00000 is a slightly darker red.
- Changing the hexadecimal value changes the binary representation and therefore the displayed colour.

Memory

J. Lakshmi Devi
192524300
c) Fetch → Decode → Execute

classmate

Question 2: 8085 Program

EXPLANATION:

- Different inputs produce different results.
- The Sign, Zero, Carry, and Parity flags change according to the result.
- These flags help control program execution.

Question 3: CPU, Memory, and I/O
